Processed glycerin - we can take it all in Mt Vernon. I have got trucking lined up. Can we load on the weekend? Aldo is willing to support.

Un-processed glycerin - we are working on finding an anaerobic digester that will take it. I have trucking once I know where it is going.

Methanol - the specific gravity indicates a purity of 98-99% and that is a little low for direct use. We are trying to find a plant that will take it but it may have to go the same route as un-processed glycerin to be used directly in a digester. I have trucking once I know where it is going.

Hello Atul:

I would like to get an update and where you are with removal of the glycerin and methanol? Please give me a call on cell to discuss.

Thanks,
Mike Sibley
